

## **Tree Injection BMP's**

**Lee Fredericks** – Western Great Lakes Territory Manager, Rainbow Ecoscience

### **Description of Presentation**

This presentation will include two separate sessions consisting of both an indoor presentation and an outdoor field demonstration. The indoor portion will include a brief history of tree injection and how current practices evolved over time and eventually came into existence. Discussion of current best management practices of both micro and macro tree injection procedures within the industry.

Examples of where and why to use tree injection as a preferred treatment option for certain species, insect pressures and tree location. Various types of tree injections methods will be discussed and demonstrated in the afternoon sessions. Examples of trunk and tissue damage from past tree injections will be shared and discussed along with unique application considerations when administering injections.
